Problem

Mushroom is a very good source of high quality protein food suitable for all age groups including vegetarians; a source of therapeutics and/or preventive nutraceuticals / nutriceuticals. People are beginning to realize the benefits of mushroom. Now, mushroom is one of the commodities traded worldwide not only as a source of nutritious food but also for its medical efficacy.

Technology

Heritage Mushroom focuses in producing quality mushrooms spawn and mushroom bags to solve the problems faced by mushroom farming which includes:

- a) Low yield and productivity
- b) No verification and poor quality of spawn
- c) **Limited** supply of cultivation medium
- d) Increasing cost production
- e) Lacking of industry-driven R&D
