### ▶ TECHNOLOGY OVERVIEW

A kiosk system for identifying or verifying the authenticity of halal status of a consumer product, comprising a kiosk housing; a barcode scanner located on the kiosk housing for reading a barcode on the product; a processing unit having a reference database of barcode-linked halal status of the product, being configured within the kiosk housing for analyzing the barcode and retrieving related information of the product from the database; an interactive multimedia device mounted on the kiosk housing and connected to the processing unit for presenting the validity of the halal status and related information of the product; and an online portal system coupled with the processing unit for periodically updating the reference database and reporting any incidence of invalid halal status of the product.
